is an arterial Road which links Wollongong with the Hume Highway. The project comprised the realignment of two curves in a 2.7 kilometre section of the road, widening sections of the existing pavement/shoulder, extending culverts and the installation of new large box culverts, a concrete median barrier along involved the realignment of over 3.5 kilometres of the existing Princess Highway through steep terrain. The Project was a RMS project and all works were carried out in accordance with standard RMS specifications and requirements. Some of the key elements of the project were Environmental Protection, Traffic the existing Sawmill to include a new Green Mill and materials handling line, relocation of the existing Dry Mill facility and installation of a new Treatment Plant.

sociated a with the construction of a Central Services Area & Support Building at the Canberra Deep Space Communications Centre

comprised construction of a 5km deviation to the existing Kings Highway at Kowen in the ACT between Queanbeyan and Bungendore. This project was build under full RMS specifications and included a large RCBC system, bebo arches, drilling and blasting of 45,000m³, with tie ins built under traffic of 5,000 vehic

nt of the dual carriageway highway for approximately 5km. Contract for bulk earthworks of 500,000m³, including 30,000m³ of blasting, select fill, topsoil, drainage blankets and bridging layers all to RMS standards for the construction of 6km. All works undertaken under strict traffic control

of the Gungahlin Drive from Barton Highway to Glenloch Interchange for 8km. This project involved removal and stockpile of topsoil – 62,000m³, general earthworks – 1.25M m³, removal off site of 143,000m³ and placement of select material - 53,000m³. This project also included the blas

the full length of the new work with openings for small wildlife every fifth barrier unit, and steel safety barriers on each side of the road

c Management, Over 400,000m³ of Bulk Earthworks, Stormwater Drainage, Bridges and Pavement Construction. In particular the earthworks were challenging due to the steepness of the terrain. There was a 25m high rock cut through one hill which required line drilling and a drainage blanket. There was also a 1

:les per day.

arrangements and tie in protocols for the Princess Highway

ting of approximately 15,000m³ of rock adjacent to a residential suburb

15m high earth fill
